leetcode.com/Blessy_10

PROFESSIONAL SUMMARY

Computer Science (Data Science) undergraduate with a strong foundation in machine learning, data structures, algorithms, and object-oriented programming. Experienced in developing software projects using Python, Java, Flask, and REST APIs, with hands-on exposure to data preprocessing, feature extraction, and machine learning model integration. Passionate about applying AI to solve real-world problems.

EDUCATION

ACE Engineering College (ACEG), Hyderabad

Bachelor of Technology - Computer Science and Engineering (Data Science)

Aug 2023 – Jul 2027

CGPA | 8.68/10

Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, Database Management Systems (SQL), Computer Networks

TECHNICAL SKILLS

Programming Languages: Python, Java, C++

Machine Learning & AI: Machine Learning Fundamentals, Data Preprocessing, Feature Engineering, Model Evaluation, Classification Models, LLM API Integration

Software Development: Flask, REST APIs, Git, GitHub, MVC Architecture, Object-Oriented Programming

Cloud: AWS (EC2, S3, IAM, VPC)

Automation: UiPath (RPA Basics)

Areas of Interest: Machine Learning, Artificial Intelligence, Data Science, Software Engineering, Cloud Computing

PROJECTS

URL Shortener | Node.js, Express.js, REST APIs

Feb 2026 – Apr 2026

- Developed RESTful backend services using Node.js and Express.js supporting URL shortening, retrieval, and redirection.
- Designed scalable API architecture with modular routing, centralized error handling, and input validation.
- Optimized backend performance through efficient database indexing, achieving sub-100 ms response times during local testing.
- Applied Git-based version control and iterative testing to improve software reliability and maintainability.

Unified QR and URL-Based Phishing Detection Framework | Python, Flask, Machine Learning

Apr 2025 – Jun 2025

- Developed a Flask-based web application to detect phishing threats from URLs and QR codes.
- Built a QR decoding pipeline and extracted URL features for phishing classification.
- Trained and integrated a machine learning classification model for real-time predictions.
- Applied modular design, testing, debugging, and iterative improvements throughout development.

RELEVANT EXPERIENCE

Google AI/ML Virtual Internship -Google

Jul 2025 – Sep 2025

- Built and evaluated machine learning models in Python, applying data preprocessing and model evaluation techniques
- Gained exposure to real-world engineering workflows, quickly learning new tools and incorporating feedback into iterations

CERTIFICATIONS

Career Essentials in Generative AI, Microsoft and LinkedIn Learning

Google AI/ML Virtual Internship, Google

Cloud Foundations, AWS Academy

UiPath Automation, ICT Academy

Cisco CCNA(ITN/ENSA/SRWE), Cisco

Networking Cloud Virtual Internship, Juniper

ACTIVITIES

- Regularly solve coding problems and build AI/software projects to strengthen technical and problem-solving skills.
- Continuously learn machine learning, generative AI, cloud computing, and modern software development.
